

CONSTATS – OR WHAT CAN WE DO WITH MEDICAL DOCUMENTS?

Péter Gergely

Institute of Forensic Medicine, University of Szeged

A forensic expert's work is based on the received material. The expert's opinion is based on medical documentations prepared by colleagues working in different fields. Understanding, interpretation and follow up of the documentation is not easy. We see many faulty, wrongful, substandard, contradictory documentations. In many cases, a uniform professional contemplation and wording of the documentation is lacking. The lecture is on these experiences of the forensic expert.
