We are describing the results of a survey on people satisfaction related to an investment called „With Soul Along The Rivers Körösök” (2014-2015). Our survey was focused on what the population thinks about the utility of the above-mentioned investment, whether they are satisfied with it or think it useless, what their opinion is about financing the maintenance, also what suggestions they have about future investments. To get answers to these questions we carried out a questionnaire survey. As a result of the questionnaire assessment, we could conclude that people of different age groups have different views on the investment, their level of satisfaction is different. It also came to light that the residents like living here but many of them would leave the town because there is not enough work opportunity. Most of the residents cannot see whether the town council would finance the maintenance of investments from its own source or from some external source. Though the population is satisfied with the investment, they do not visit it too often
