We were searching for the first part of the development period from 2014 to 2020 in Sarkad, which mainly covers infrastructural investments. The purpose of our research is to investigate how the inhabitants think about the investments at a given time, and also to investigate the effect of the overall investments that they have experienced in Sarkad, in their own part of the city or in their own lives. The opinions of the participants in our questionnaire suggest that the upgrading's should be continued and, moreover, more investment for job facilities should be made by the local government in the city. This way, the satisfaction of the population could be maintained and the degree of emigration could be reduced
